

## IMIS fact sheet

Application type	Insurance Management Information System
Application license	Proprietary
Application technology	Web and mobile application: Microsoft .NET Framework (core), Android SDK (mobile apps)
Keywords	Insurance management information system, health insurance, universal health coverage
Application description	<p>IMIS is a comprehensive insurance management system designed for supporting business processes of insurance schemes, including the management of information on insured individuals and families, definition of insurance products and management of claims and reimbursements.</p> <p>The system is designed specifically to cater for the needs of health insurance schemes for rural population and the informal sector, where no pay rolls can be utilized for membership registration. Members can be enrolled through mobile phones, among other mobile-based functionality. IMIS can be configured to accommodate various schemes involving management of benefits to a membership base, such as voucher schemes, health equity funds, and other forms of insurance.</p>
