openMEDIS fact sheet

Application type	Computerized Maintenance Management System
Application license	Open source, GPL license
Application technology	Web application: PHP & MySQL
Keywords	Health technology management, medical equipment, inventory, maintenance management, management information system, health information system
Application description	The constant increase in the variety and complexity of available health technologies calls for good instruments to manage resources efficiently. openMEDIS is a flexible and easy-to-use software tool for inventory of medical equipment and maintenance management. Particularly in resource poor settings, the combination of openMEDIS and targeted policies and training provides a foundation for better Health Technology Management and cost effective planning, and will eventually contribute to better quality of care. Key functionalities of the tool are: - Medical equipment inventory - Integration of nomenclature - generic device lists - Essential equipment lists and gaps-analysis - Maintenance requests and interventions management - Supplier database - Incidents reporting - Summary graphs for better visualization and diverse reporting
